

TELFORD WAX BLOCK RODENTICIDE

Environmental Health · Rodenticides

Pack size: 2.5-5 kg · Form: block

Target: rat, mouse

Active Ingredients: Difenacoum 0.005% w/w (Wax)

Use:

Trafford Blocks are highly palatable extruded bait based on the latest anticoagulant active ingredient Difenacoum and can be used in and around buildings, in areas including agricultural, domestic, commercial, food factories, public services, sewers, municipal and industrial buildings. The effects on rodents can be seen 3 to 5 days after the first consumption of the bait. Rats may take several days before starting to feed because of their neophobic behaviour (fear of anything new). Rats and mice can consume a lethal dose in one feed. The green colouring of the blocks shows in the rodent excrement indicating bait has been taken.

Where to Use:

In and around buildings and sewers in urban and agricultural buildings. Baiting for Mice: Place up to 50 g of bait (3 blocks of 15 g each) in covered, tamper resistant bait stations or covered bait points spaced 2 - 3 metres apart (low infestation) or 1 - 1.5 metres apart (high infestation) in areas where mice are active. Mice feed sporadically and will consume small quantities from numerous feeding points.

Mode of Application:

Place up to 200 g of bait (13 blocks of 15 g each) in covered, tamper resistant bait stations or covered bait points spaced 8 - 10 metres apart (low infestation) or 4 - 5 metres apart (high infestation) in areas where rats are active. Rats will consume from a single feeding point. For
